

## Stock Take App

### “Accelerating Performance for Businesses Intelligently”

Do you know exactly the quantity of your physical stock is? A warehouse system will provide you the data, but your real stock count may tell another story. This isn't actually a surprise because human error is inevitable during the inventory transactions—with either quantity unrecorded or information incorrectly put into the system. That's why periodic stock take and physical inventory count have always been an integral part of the organization's operations to identify the stock discrepancy.

Stock Take App can work very effectively together with your current ERP solutions to reduce stock take fault, accurately capture valuable data, and improve overall supply chain operational efficiencies. It is an easy-to-use, barcode-based application, and all you need is a mobile computer with an Android OS and in-built barcode scanner. Plus, its economical feature makes them highly attractive to businesses.

Stock Take App can be implemented quickly to grow business scales, and performed with 2 scenarios:

#### 1. Piece Scan

It is designed to scan items by piece in an unsorted bin. Each item is scanned, picked up from the original bin, and then placed into another bin.

#### 2. Scan With Manual Key-in Quantity

It is used for items with the same product codes in their respective sorted bins, and items in bulk at store or warehouse area. Users scan just one item among others with the same product code, and manually enter the counted quantity.

GFS brings solutions that fit your business's unique needs. Stock Take App offers you the following benefits:

- Easy-to-use, economical, and stand-alone
- Fix stock inaccuracy for misplacement, mislabeling and loss
- Improve operational efficiency with accurate inventory
- Reduce out-of-stock cases via real-time data
- Boost customer service with high fill rates
- Reduce operational and inventory-carry costs

The value added features and functions offered by Stock Take App delivers your business operational results faster, better, cheaper:

- Blind count method is applied to locate and scan the right item, and to eliminate false guesses at the counter
- Options of piece scan or scan with manual key-in quantity
- Product Master Data can be imported externally in delimited text file for validation
- New item is able to be inserted
- Stock Take Data is able to be exported for other systems
- Stock Take List with scanned items is included
- User access control with User Master Data imported externally in delimited text file
- Obsolete Product Master and Stock Take Data can be deleted via Stock Take App
- Output File for Stock Take Data is customizable: delimiter type, header, and data format
