

Stock Put-Away App

“Accelerating Performance for Businesses Intelligently”

In today’s fast-paced warehouse environment, the room for error has shrunk just as the need for a higher volume of transaction has increased. Consequently, products are put away on the same day, if not immediately, that they are received for optimal warehouse process. Delay in put-away changes everything—it becomes a roadblock for operation’s efficiency and accuracy, and a great detriment to product condition.

The good news is, with the right combination of innovative technology application and simple equipment, Stock Put-Away app is helping warehouse operations to move products efficiently from the receiving area to their designated places, such as storage area, replenishment area, pick area, or even production area.

By eliminating paperwork and using a barcode system, Stock Put-Away App runs on an Android OS with in-built barcode scanner, generates digital data output, and works perfectly with your ERP or Accounting System. You can now effectively boost the process cycle time with the optional barcode label printed for products and bin locations, and staging areas upon receiving and before put-away.

Because Stock Put-Away App promotes efficiency and increases productivity, you can now **increase output in the receiving area, without adding headcount**, along with other benefits:

- Avoid delay, track bin locations and put-away product quantity with barcode scanning
- Require less warehouse space
- Reduce damaged products due to human touches

Stock Put-Away app is a smart application built for all business entities and government agencies, work beautifully with and specialized for warehouses. The **features and functions are,**

- PO data can be imported in delimited text file
- Manual data key-in or scan-in when PO data is not available
- Product Master Data can be imported in delimited text file for validation
- Validation for invalid or unmatched products, and quantity
- Scanned data can be exported
- Simultaneous process of multiple POs
- Put-away list is included
- User Master Data can be imported in delimited text file for user access control
- Obsolete PO, Product Master Data, and Scanned Data can be deleted from the app
- Output file for Scanned Data is customizable: delimiter type, header, and date format
- Flexible configurations for put-away devices

It takes future-thinking leaders and leading edge applications to become a company of the future. Our Smart Application will help you get there.
