

Stock Receiving App

“Accelerating Performance for Businesses Intelligently”

A receiving area is prone to errors—just one of which can have a tenfold impact across the rest of the warehouse, throughout the entire operation, up to the distribution center. Left to chance, the un-optimized receiving process not only erodes a material handler’s overall efficiency, but it can also create key labor, productivity, and profitability issues in an organization.

Stock Receiving App is a perfect tool designed to keep workers to be as productive as possible in the fast-paced warehouse environment, and enable pickers to perform in an optimized and accurate fashion. Designed to synchronize with your ERP and Accounting systems with digital data output, Stock Receiving App utilizes proof of purchase, or purchase order, to serve as the foundation for receiving goods.

Receiving process is a critical juncture where labels are added, items are counted and reconciled, and issues are found and rectified immediately. Pushed to ensure a smooth and an efficient process, Stock Receiving App adopts the following receiving conditions:

- Confirm supplier details, purchase order (PO), items, and quantity
- Reject oversupply
- Record undersupply
- Key in or capture details of delivery order (DO) upon receiving

Benefits of the Stock Receiving App include **accurate receiving, increased productivity in the midst of labor crunch, real-time monitoring, reduced product**

damage, effective space usage, minimal training, and a paperless barcode system. Furthermore, the app helps you minimize errors in transactions with vendors, and ensure high levels of satisfaction. It highlights missing cartons on pallets, prevents overpay, backorders, and inaccurate items received.

In an effort to help you solve the most pressing pain points in the process of receiving, Stock Receiving App is equipped with features and functions below:

- PO data can be imported in delimited text file
- Manual data key-in or scan-in when PO data is not available
- Product Master Data can be imported in delimited text file for validation
- Validation for invalid or unmatched products, and quantity
- Scanned data can be exported
- Simultaneous process of multiple POs
- Receiving list is included
- User Master Data can be imported in delimited text file for user access control
- PO, Product Master Data, and Scanned Data can be deleted from the app
- Output file for Scanned Data is customizable: delimiter type, header, and date format
- Flexible configurations for receiving devices

The minimum system requirement of Stock Receiving App is an Android OS with in-built barcode scanner. By using barcode technology to streamline the receiving process, you can effectively remove redundant process while maximizing resource utilization.

Stock Receiving App helps all business entities and government agencies to enhance worker productivity, operational efficiency, and organizational profitability.
