

Stock Issuance App

“Accelerating Performance for Businesses Intelligently”

Today, warehousing has never been more mission-critical: with expected delivery dates becoming shorter, and omni-channel efficiencies becoming non-negotiable for many warehouses and logistics. There are also many intricate work orders (WO) to fulfill through issuance, or picking process, in order to ensure materials or products reach the delivery platform accurately, meeting organization’s standards of safety, security, and productivity.

Grand-Flo’s Issuance App is Android-based that requires an in-built barcode scanner in your mobile computer. It enables correct picking quantity according to work orders, through barcode scanning of products and bin locations before delivery. With an effort to deliver the right solutions to your warehouse and logistics, Issuance App supports two types of issuance:

1.Raw Material Issuance

Considered an internal issuance, raw material is first picked in the warehouse, and delivered to production staging area. Then, raw materials are issued for production.

2.Finished Goods Issuance

This is an external issuance with initial picking of products in the warehouse, delivery to outgoing staging area, and finally issuance for shipping to customers.

Wrong items, late shipments, and poor logistics could turn your customers into your competitor’s customers. With unmatched flexibility and benefits of our Stock Issuance App, you can keep your operations efficient, your customers happy, and your bottom line healthy:

- Plan pick route according to work orders
- Retrieve accurate info through barcode label, and eliminate the time spent picking
- Reduce picker’s travel time with advanced product or material info
- Prevent false picking with barcode scanning

Stock Issuance App is no longer just a warehouse tool. It is a solution to achieve the ever-evolving digitalization needs of warehouses and logistics, including features and functions as follows:

- Support Options: Picking Process Only or Picking with Shipping Process
- A product can be picked from multiple locations, and the quantity is accumulated
- WO data can be imported in delimited text file
- Manual data key-in or scan-in when WO data is not available
- Product Master Data can be imported in delimited text file for validation
- Validation for invalid or unmatched products, and quantity
- Scanned data can be exported
- Simultaneous process of multiple WOs
- Issuance list is included
- User Master Data can be imported in delimited text file for user access control
- Obsolete WO, Product Master Data, and Scanned Data can be deleted from the app
- Output file for Scanned Data is customizable: delimiter type, header, and date format
- Flexible configurations for issuance devices

A vast majority of enterprises and government agencies have employed Stock Issuance App to facilitate supply chain efficiency. Experience now how together we can continuously improve your operations.
